CSET Research Symposium

Welcome to the 2014 Jackson State University's College of Science, Engineering and Technology (CSET) Research Symposium being hosted in our architecturally beautiful Engineering Building - the first LEED [Green-] Certified building in the city of Jackson, Mississippi. This interesting building environment, housing the Dean's Office and the Departments of Electrical & Computer Engineering and Civil & Environmental Engineering, highlights JSU's commitment to leadership in green technologies.

With great pleasure we welcome the symposium and its meetings, panels and presentations. We hope you enjoy the venue as much as we do.

A main CSET objective focuses on exposure of students to the research environment as early as possible in the undergraduate curriculum. Such embellishes the development of the skills and knowledge required for research and enhances preparation for graduate study. This symposium offers excellent opportunities for students to advance their understanding of science, technology, engineering and mathematics and their knowledge of research undertaken at the local, state, and national levels.

Our research symposium recognizes the successful research of several programs within our college and our state and we desire to extend special thanks to them and to the students, staff and faculty here at Jackson State University that have contributed to this event.

Enjoy your time here!
