## CSC 641 Network Science

Instructor: Dr. Natarajan Meghanathan
Sample Questions

## Module 1: Graph Theory for Network Science

1) For the graph given below, find the probability distribution for the degree of the vertices and use the distribution to determine the average degree of the vertices in the graph.

2) Find the average degree of the vertices in each of the networks below.

| $\underline{\text { Network Name }}$ | $\underline{\text { Nodes }}$ | $\underline{\text { Links }}$ | Directed / <br> $\underline{\text { Undirected }}$ | $\underline{\text { \#Nodes, } \mathrm{N}}$ | $\underline{\text { \# Links, L }}$ | Average <br> Degree, $<K>$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| E. Coli Metabolism | Metabolites | Chemical <br> reactions | Directed | $\mathbf{1 , 0 3 9}$ | $\mathbf{5 , 8 0 2}$ |  |
| Yeast Protein <br> Interactions | Proteins | Binding <br> interactions | Undirected | 2,018 | $\mathbf{2 , 9 3 0}$ |  |
| Power Grid | Power plants, <br> Transformers | Cables | Undirected | $\mathbf{4 , 9 4 1}$ | $\mathbf{6 , 5 9 4}$ |  |
| Science <br> Collaboration | Scientists | Co- <br> authorships | Undirected | $\mathbf{2 3 , 1 3 3}$ | $\mathbf{1 8 6 , 9 3 6}$ |  |
| Mobile Phone Calls | Subscribers | Calls | Directed | $\mathbf{3 6 , 5 9 5}$ | $\mathbf{9 1 , 8 2 6}$ |  |
| Email | Email <br> addresses | Emails | Directed | $\mathbf{5 7 , 1 9 4}$ | $\mathbf{1 0 3 , 7 3 1}$ |  |
| Internet | Routers | Internet <br> connections | Undirected | $\mathbf{1 9 2 , 2 4 4}$ | $\mathbf{6 0 9 , 0 6 6}$ |  |
| Actor network | Actors | Co-acting | Undirected | $\mathbf{2 1 2 , 2 5 0}$ | $\mathbf{3 , 0 5 4 , 2 7 8}$ |  |
| WWW | Web pages | Links | Directed | $\mathbf{3 2 5 , 7 2 9}$ | $\mathbf{1 , 4 9 7 , 1 3 4}$ |  |
| Citation network | Papers | Citations | Directed | $\mathbf{4 4 9 , 6 7 3}$ | $\mathbf{4 , 7 0 7 , 9 5 8}$ |  |

4) Determine the assortative index of the following graph.

5) Determine the maximal node matching, maximal assortative matching and maximal dissortative matching for the following graph. Determine the following for each of the above: (i) the set of edges constituting the matching (ii) the \% of node matches (iii) assortative index of the matching.

6) Determine the cocitation and bibliographic coupling matrices of the following directed graph:

7) Find the vertex projection and group projection of the following bipartite graph. The vertices are identified with a numerical ID whereas groups are identified with an alphabetical ID.

8) Determine whether the following graph is bipartite or not using the Breadth First Search algorithm. If the graph is bipartite, determine the two partitions.

9) Find the number of walks of lengths 2 and 3 in the following graphs using the method of adjacency matrix multiplication.

10) Determine the following for the graph below: (i) Diameter (ii) Radius (iii) Weiner Index (iv) Average Path Length and (v) Set of vertices constituting the "center" of the graph.

11) For each of the graphs below, determine
(i) Whether the graph is a DAG? If the graph is DAG, determine a topological sort of the vertices of the graph.
(ii) Whether or not there exists at least one strongly connected component with more than one vertex? If the graph has a strongly connected component involving more than one vertex, determine each of such strongly connected components.

12) Consider the undirected versions of the graphs in Q11. Determine the local clustering coefficient of each of the vertices in these graphs.
