```cpp
1    #include <string>
2    #include <ctype.h>
3    #include <iostream>
4    using namespace std;
5
6    // this program inputs a string that could have more than one
7    // word and prints a new string that has uppercase characters
8    // corresponding to the original string
9    int main(){
10
11       string originalString;
12       cout << "Enter a string: ";
13       getline(cin, originalString);
14
15       string upperCaseString("");
16
17       for (int index = 0; index < originalString.size(); index++){
18
19           char c = originalString[index];
20           upperCaseString += toupper(c);
21
22       }
23
24       cout << upperCaseString << endl;
25
26    return 0;
27    }
```

```
Enter a string: jackson state university
JACKSON STATE UNIVERSITY
```
